

# LIFT STATION & SEWER

## SERVICES

Josko Services offers a variety of Lift Station Service Plans and Products.

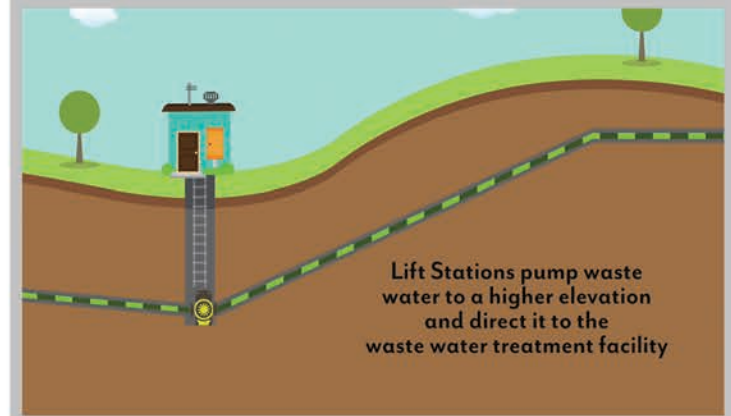

A properly maintained lift station will save hundreds or even thousands in costly repairs or replacements.

If you have a commercial lift station, a service contract gives you the peace of mind that your equipment is being properly maintained while saving you money. Any recommended work will be accompanied by a proposal for approval prior to commencement of work.

Lift stations, also called pumping stations, contain pumps, valves and electrical equipment necessary to move liquids (usually water, wastewater or sewerage) from low to high elevation. This equipment must be maintained to ensure your system runs efficiently.

Your Lift Station maintenance plan will contain the following:

- Control panel service
- Proper voltage
- Pumps pulling proper amps
- Motor starters functioning properly
- Alternating relay (if equipped)
- Phase monitor (if equipped)
- Hour meters, audio & visual alarm operating properly
- All indicator lights inside panel, loose or corroded wires
- Check float positions for proper cycling
